

Please oppose HR 4026. Satellite radio is the best thing since nickle beer. I travel all of Texas, Oklahoma, Louisiana, New Mexico and points north and west, and never before have I been able to have uninterrupted radio service throughout my travels, especially out west. If I get to Dallas, or San Antonio or Denver, I can get travel and weather immediately instead of having to search the radio dial for whatever station may carry such information within the areas I am traveling. I can listen to continuous stock market reports, or continuous news or music of numerous variety (without commercial interruption). It appears to me that this HR 4026 is nothing more than a power grab by the NAB to stop satellite radio as it tried to stop television in its formative years.
